

KWH ELECTRIC

The communication layer for every distributed asset.

One controller. Unlimited applications.
Open energy infrastructure.

THE PROBLEM

Today, the hive is fragmented.

Every OEM ships a closed ecosystem.

80% of distributed assets cannot participate outside their vendor ecosystem.

- Assets behave like Toyotas despite Ferrari hardware
- APIs are expensive and proprietary
- Owners cannot discover higher-value applications

SECURITY

Every asset protects itself.

Compromise never spreads beyond one device.

Trusted execution

Policy runs inside the device.

Zero-trust identity

Each asset authenticates alone.

Data sovereignty

Telemetry stays in jurisdiction.

INTEROPERABILITY

Every secure asset can work together.

Identity first.
Discovery second.
Coordination third.

Three curves crossed at the same time.

DISTRIBUTED ASSETS DEPLOYED

Illustrative shape

IEEE 2030.5

Open standards now exist.

<\$50 edge compute

Hardware is no longer expensive.

AI agents

Machines can now coordinate assets.

One device. One license.

Every battery. Every inverter. Every EV. Every pump.

Translate once. Deploy everywhere.

Enroll once.

Every asset receives a secure digital identity.

Battery

Gateway

Enrollment

Certificate

Fleet

5 minutes

Per asset, start to dispatchable

QR onboarding

No laptop, no site engineer

Remote provisioning

Certificates issued over the air

CUSTOMER APP

One app. Every energy device.

Monitor

Every asset, one live view.

Control

Set it once, it runs itself.

Authorize

You decide who may dispatch.

One fleet. Thousands of assets.

LIVE FLEET MAP

FLEET HEALTH

98%
assets online and reporting

REVENUE THIS MONTH

[]
across all grid programs

ONLINE DEVICES

[]

CAPACITY

[] MW

Dispatch window active

Requested **4.0 MW** Delivered **3.9 MW** Response **340 ms**

One controller. Unlimited applications.

Gateway

Install, meter, revoke

Ten applications,
one install

Demand Response

Virtual Power Plant

Backup Power

TOU Optimization

Carbon

Microgrid

Wholesale Markets

Energy Trading

Demand Flex

Frequency Response

Hardware installed once. Software expands forever.

Every application creates new revenue.

OWNER KEEPS
[]
Bill savings from TOU and self-consumption

UTILITY PAYS
[]
Grid incentives for verified response

MARKET PAYS
[]
Wholesale and capacity participation

AI AGENTS

Every device can negotiate.

Shared intelligence, not a central owner. Each asset acts for itself, inside limits its owner set.

Three revenue lines, one installed base.

HARDWARE

~₹6,000

DER Gateway, indoor

~₹24,000

Transformer Gateway, outdoor

Target prices at volume. Sold once.

LICENSE

[]

Per asset, per month

[%]

Gross margin

Recurring. No per-dispatch fee.

MARKETPLACE

[%]

Revenue share per application

[]

Applications per gateway

Compounds without new hardware.

Every installed asset is addressable.

TAM — GLOBAL FLEXIBILITY PLATFORMS

\$23B

by 2033, ~25.8% CAGR. 122+ GW already on VPP platforms across 48 countries.

SAM — ASSETS REACHABLE BY RETROFIT

[]

Behind-the-meter assets in target markets, gateway or OEM-cloud reachable.

SOM — FIVE-YEAR BEACHHEAD

[]

India DISCOMs via Beckn DEG, then US utilities and aggregators on IEEE 2030.5.

Nobody else holds all five.

CATEGORY	SECURITY	OPEN	MARKETPLACE	AI	INTEROPERABILITY
OEMs Enphase, Tesla, Sungrow	●	○	○	◐	○
Aggregators VPP operators	◐	◐	○	◐	◐
DERMS AutoGrid, Uplight	◐	◐	○	●	◐
Hardware gateways Kalkitech and peers	◐	●	○	○	●
kWh Electric Edge-up, standards-native	●	●	●	●	●

● full · ◐ partial · ○ none. Assessment is ours, from public product documentation.

Land on the asset. Expand to the network.

Built by people who shipped this before.

Arham Shah
FOUNDER & CEO

Ex-Tesla, Rivian and Beckn; launched the first open energy networks in India and Brazil.

Advisor — Sujith Nair, co-founder of Beckn

Sudheer Kumar
FORWARD DEPLOYMENT

Built utility-scale DER management at Uplight and AutoGrid before joining as founding engineer.

Advisor — Dr. Pramod Varma, chief architect of UPI and Aadhaar

Yuvaraju Meenuga
BACKEND & INTEGRATIONS

Writes the protocol drivers and the cloud that every gateway reports into.

15+ years combined at Uplight and AutoGrid

Building the communication layer for every DER.

RAISING

\$1.5M

On a SAFE, [\$ cap] cap. [\$65K] raised to date.

RUNWAY

[X] mo

At the current ~\$2,000 monthly burn, extended
for the production run.

MILESTONES

- [X] MW under management
- [X] device profiles shipped
- [X] transformer sites certified

One controller. Unlimited applications.
Open energy infrastructure.
